## Section 11 - Toxicological Information

**RTECS#:**

**LD50/LC50:**

LD50 data for Oxalic acid, anhydrous (CAS no. 144-62-7): LD50[rat] - Route: oral; Dose: 7500 mg/kg

CAS# 6153-56-6

**Carcinogenicity:**

CAS# 6153-56-6: Not listed by ACGIH, IARC, NTP, or CA Prop 65.

## Section 12 - Ecological Information

**Ecotoxicity:**

**CAS# 6153-56-6.** This material is expected to be toxic to aquatic life. The LC50 values for fish: Bluegill/Sunfish: LC50 = 4000 mg/L; 24 Hr.; Static Conditions Fish: Mosquito Fish: LC50 = 1350 mg/L; 24 Hr.; Static Conditions No data available.

**Environmental: CAS# 6153-56-6.** An estimated Koc value of 5 for oxalic acid indicates high mobility in soil and oxalic acid has been detected in groundwater. Several screening studies and grab sample tests indicate that under aerobic and anaerobic conditions, oxalic acid will readily biodegrade in aquatic ecosystems. Based on an experimental Henry's Law constant of  $1.4 \times 10^{-10}$  atm-m<sup>3</sup>/mole at 25°C, oxalic acid is expected to be essentially nonvolatile from water. Adsorption to sediment and bioconcentration in aquatic organisms may not be important fate process for oxalic acid.

**Physical: CAS# 6153-56-6.** Oxalic acid in the ambient atmosphere may react slowly with OH radicals, but it is removed rapidly by photolysis; the daytime persistence of oxalic acid is not expected to exceed a few hours. Based on its high water solubility, removal from air via wet deposition is likely to occur. Oxalic acid may also be removed from air via dry deposition with 11% of the total deposition being dry deposition.

**Other: CAS# 6153-56-6.** Based on an average experimental water solubility of 220,000 mg/L at 25°C and a regression derived equation, the BCF for oxalic acid can be estimated to be approximately 0.6 and therefore should not be expected to bioconcentrate in aquatic organisms.
